16th Workshop on Antarctic Meteorology and Climate (Virtual, June 21-23, 2021)

Committee:

David Bromwich
Scott Carpentier
Arthur Cayette

Steve Colwell
John Cassano
Matthew Lazzara
Jordan Powers

Byrd Polar and Climate Research Center
Polar Meteorology Group
The Ohio State University

6th Year of Polar Prediction in the Southern Hemisphere (YOPP-SH) Meeting

Committee:

David Bromwich, Kirstin Werner

Overview

- About 140 people signed up for the WAMC meeting.
- About 110 people signed up for the YOPP-SH meeting.
- Scientists from over 15 countries attend the meeting.

WAMC

The WAMC brings together those with research and operational/logistical interests in Antarctic meteorology and forecasting and related disciplines. As in the past, the annual activities and status of the AWS, AMPS, and AMRDC efforts will be addressed, and feedback and results from their user communities will be solicited. More broadly, this workshop also is a forum for current results and ideas in Antarctic meteorology, numerical weather prediction, and weather forecasting, from contributors around the world.

YOPP-SH

Project investigators and representatives of national agencies active in Antarctica will provide updates on research resulting from the YOPP summer Special Observing Period (SOP) in the Southern Hemisphere, November 16, 2018 to February 15, 2019. Advanced planning for the upcoming winter SOP in 2022 and its focused activities during the Targeted Observing Periods will be highlighted.
